Abstract:

This report provides updated estimates of family living expenses and living wage for Shanghai, China. The update for 2022 takes into account inflation and changes in payroll deductions since the original Anker living wage study carried out in August 2015 (Yuan, Ke, Jing & Feng, 2015).

Keywords: Living costs, living wages, Anker Methodology, China

JEL classifications: J30, J50, J80.

1. BACKGROUND

This report updates the Anker living wage and family living expenses to 2022 for Shanghai, China (Yuan, Ke, Jing & Feng, 2015). The update takes into account the amount of inflation since the original study in August 2015. This is done by updating the August 2015 net living wage and living income expenses to mid-year 2022 by inflation including expected inflation to mid-year according to the Asian Development Bank (ADB). This provides average living wage and family living expense estimates for 2022. Without accounting for inflation, the net living wage estimated in 2015 would not be sufficient for workers to have a basic but decent standard of living in 2022 because the purchasing power of the living wage would have decreased. The gross living wage (aka living wage) is updated to 2022 by also taking into consideration income taxes and mandatory deductions from pay that workers would need to pay on the updated 2022 living wage, using the laws in effect at the beginning of 2022.

2. LIVING WAGE ESTIMATE IN ORIGINAL COUNTRY REPORT FROM AUGUST 2015

The original living wage country report estimated the net living wage as RMB 3,701 in August 2015. This was the required take-home pay for workers for decency in August 2015. The gross living wage, which also takes into account income taxes and mandatory deductions from pay for social security and union dues, was estimated as RMB 4,135 in August 2015. The living expenses for a basic but decent standard of living for a reference family in the original country report was estimated as RMB 6,588 in August 2015.

3. INFLATION RATE USED FOR UPDATE

The National Bureau Statistics of China (NBSC) is the government body responsible for computing and reporting price indices in China. It reports several different consumer price indices, such as the average for the country, urban and rural price indices for the national and province levels, and urban price indices for main 70 cities. In this update, the Household Consumer Price Index for the city of Shanghai is used.

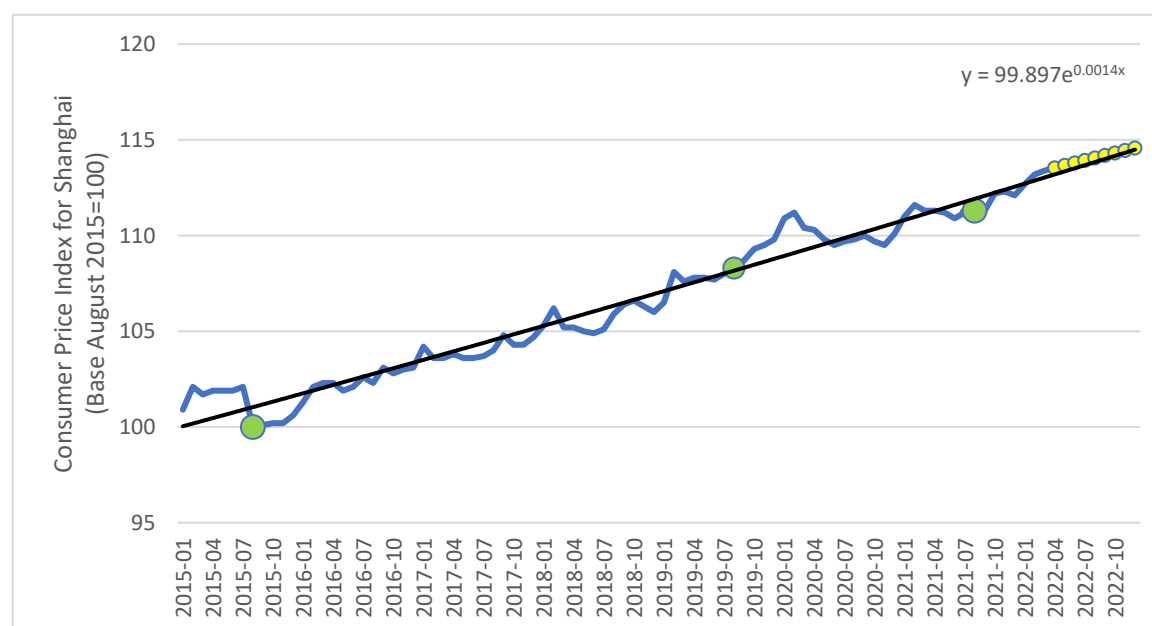

4. RECENT LEVEL OF INFLATION

Between August 2015 and December 2021, the inflation for Shanghai was 12.1%. The annual inflation rate between August 2020 and August 2021 for Shanghai was 1.37%. The IMF estimates that the inflation rate in China for 2022 will be 2.1%¹, but this value is probably too low given the new COVID-19 outbreaks in China and the Ukraine conflict, which could create new food price pressures.² The Asian Development Bank (ADB) currently expects the inflation rate in China for 2022 to be 2.3%.³ This projection was added to the Consumer Price Index numbers shown in Figure 1, while taking into account observed inflation for the first few months of 2022 to arrive at an average inflation rate of 2.3% for 2022.

5. MANDATORY DEDUCTIONS

On 30 August 2018, the National People's Congress passed the amendment of the Individual Income Tax Law of the People's Republic of China.⁴ The current Individual Income Tax in China (IIT) follows a progressive tax system, with rates ranging from 3% to 45%. In 2022, workers earning a living wage fall into the RMB 3,000 to RMB 12,000 per month tax bracket which is subject to a 10% tax rate minus a so called 'quick deduction' of RMB 210. However, since there are various tax deductions, workers earning a living wage would not pay income tax.⁵

Social security contributions to pension, medical and unemployment funds are mandatory in China. According to the most recent information,⁶ mandatory payroll deductions in Shanghai remain 10.5%.⁷

⁷ We did not include employee contributions to the Housing Provident Fund when we calculated the amount of mandatory payroll deductions, despite this deduction being substantial when it is paid (e.g., 12, 7, 12, and 6 percent of wages in Beijing, Shanghai, Shenzhen, and Chengdu respectively according to <https://www.1421.consulting/2018/06/chinese-taxes-and-social-insurances/>). There are two reasons for this decision. First, it is common that workers outside government and white-collar firms, such as in manufacturing enterprises, do not contribute to the Housing Provident Fund according to FLA (Fair Labor Association) verification assessments. Second, it appears to be fairly easy for workers to access contributions to their housing fund every year for ongoing expenses and thus reduce the amount of money required for ongoing living expenses. Withdrawals are allowed for home loan, home down payment, mortgage payment, home improvement, and medical emergencies, and in 2021 it might be possible to

6. UPDATED LIVING WAGES AND FAMILY EXPENSES FOR 2022

The updated family living expenses for 2022 are RMB 7,499 per month. The gross living wage, which takes into account mandatory payroll deductions, is RMB 4,707 per month for 2022. These are average estimates for the year 2022. Table 1 provides details of the original and the updated living wages and family living expenses. Notice that the living wage in USD fell slightly in the past year, because depreciation of the RMB in this period was slightly greater than inflation.
